ECOMMERCE PROJECT

- **Frontend:** Built a complete e-commerce website that allows the user to browse products, view details, search products,user can register to the site and after registration they can login any time and if they forget their password,forget password link is also given so that they can change their password with the registered email,after login user will be able to order product,and write reviews for the product and they will be able to see order status of the product with invoice number .I used COD and stripe payment gateway for the payment of the ordered product.
- **Backend:** Admin panel that allows admin and admin side user to manage products, brand, category, blogs, slider, coupons, shipping area (country,state,division), blog, they can add,delete,update all sections and approve reviews and approve orders and admin will manage all the status of the ordered product like pending, confirm, processing, picked, shipped, delivered, cancel products and we can download invoice as well.There are two kinds of admin one will have rights to access all the sections,and other admin user will not be able to access all sections of the site and main admin will give access privileges to other admin users.
- **laravel php framework. Bootstrap, CSS, Javascript and jQuery is used:** Design and manage Database with MySql
